

MISSION

"Creating value is our prime goal"

After over 25 years of business activity, the guidelines that have governed and directed the industrial development of Pentax Industries SpA can finally be traced. Actions and processes have intersected each other with the evident main aim of creating value and benefits for the various parts of the production and distribution process. A rational allocation of available resources, together with a refined programme of decentralization of production, have enabled the company to quickly adapt every time to fast-changing market conditions.

Close focus on markets, undertaking to respond to the specific requirements of different areas, with special attention for technological progress. All this in a careful "customer satisfaction" policy perspective.

Gianluigi Pedrollo,
Chairman Pentax Industries

Industry leader

"A quality product accessible to everyone"

Giorgio Pedrollo, General Manager

For many years now, PENTAX has enjoyed a large share of the world motor-driven pump market. The sales department is constantly working to better serve existing customers and open new markets, thanks to the broad range of products at disposal that allow to cover most of the pump field applications. Close focus is placed on market surveys so as to immediately transfer any new requirements

to the R&D department: the best way to develop and adequately foresee future scenarios. The range of products is extremely vast and so the company is today able to cater to many different requirements, and above all manage, every time, to supply a top-quality product at an affordable price.

Organisation

The company headquarters are located in the industrial area of Veronella, just a few kilometres from Verona. New production facilities have recently been purchased in Italy. Over the years, the company has set up an organisation able to adequately support business activities, with an extensive

network connecting it to companies already operating on the market and strengthening its ability to face up to the hidden threats posed by the global economy. PENTAX's products are available in over 100 countries thanks, among other things, to its capacity to overcome the import barriers erected by a number of governments and which have in

many cases proved negative for the entire population. The company is able to exhaustively dialogue with any market, placing its expertise at the disposal of anyone who requires it.

IN FIVE WORDS PENTAX.

RELIABILITY

Choosing Pentax means choosing safety in any operating phase.

Pentax owes its success to over 25 years of experience in the international market of hydraulic electric pumps. It is constantly ready to meet customer requirements with a professional approach and spirit of innovation.

Pentax describes itself through 5 concepts that characterise it: the 5 principles of Pentax. Each one represents a strongpoint, a value the company is proud of.

Pentax represents reliability to customers and respect for co-workers, every day. It guarantees dynamic production processes and flexible distribution systems that cover the globe. It is constantly focused on market requirements. It is a reference point that supports entrepreneurial activities with customised solutions on an international level.

VARIETY

The best service: a wide range of Pentax products, one for every requirement.

Pentax boasts of one of the widest range of products available today on the market, all of which are high-quality solutions for the domestic and industrial sectors.

The commercial sector works constantly in the search of new solutions for potential customers in order to develop and envisage future demands. The range of Pentax products is extremely vast since it endeavours to meet the most diverse demands according to the sector of use and type of device: submersible, submersed, surface pumps etc., for all agricultural, civil, domestic and industrial sectors.

FLEXIBILITY

Pentax listens, analyses and works to offer the best for its customers.

Multiple variables make a service perfect: customer requirements, geographic area of interest, atmospheric agents, etc. Pentax carries out in-depth research for each case, identifies the best solution and intervenes safely.

Production evolves over many assembly, finishing and testing lines. Flexibility and experience play an important part in order to constantly meet customer requirements, thus strengthening relationships of trust with partners and suppliers. Each line is able to promptly and precisely manage the production process of any product.

QUALITY

Where there is control, there is reliability: the foundation of success.

Pentax subjects its products to constant quality controls: from certifications, to line controls, to tests. Always to guarantee the best.

LINE CONTROLS

All Pentax solutions undergo individual (not random) functional, electrical and hydraulic tests, for fool-proof testing lines.

CERTIFICATES

The company's policy is imprinted on constant development of all production and administration processes, with a view also to safeguarding the environment: a commitment certified by the introduction of a Quality Management Systems Certificate in compliance with UNI EN ISO 9001 and a Environmental Management System Certificate in accordance with the UNI EN ISO 14001 standard. Moreover, planning for a Health and Safety Management System in the workplace, in accordance with standard OHSAS 18001, is underway.

TESTING, RESEARCH AND DEVELOPMENT AREA

Pentax has created two entirely automated rooms equipped with technologically advanced equipment to study and test newly-designed prototypes. It subjects all devices to specific tests to evaluate their operation, also in highly-stressed situations.

CERTIFICATO UNI EN ISO 9001:2008

SPEED

Impeccable delivery times.

Each order is dispatched within the pre-established times, since customer satisfaction is its priority. As a result of its experience, Pentax is able to immediately adapt itself to diverse market situations, dispatching orders promptly and ensuring extremely tight deadlines.

The strongpoint of Pentax is based on organisation: productive and distributive. It is able to minimise delivery times of orders, adapting itself rapidly to unforeseen changes in demand.

The range of products is one of the widest on the market with high technological levels. However, Pentax does not renounce to specialisation: a value guaranteed by the expertise of human resources, an undisputed company asset.

Quality

"high quality testing"

Where there is control, there is reliability: the foundation of success. Pentax subjects its products to constant quality controls: from certifications, to line controls, to tests. Always to guarantee the best.
