TYPE 32D

## DRY RUNNING SINGLE SEAL

Technical Specification

A – Seat / Mating Ring

B – Face / Primary Ring

C – Retainer

D – Wear Indication

E – Optional
   (DIN) Flange

Product Description

Type 32 D vessel seals are outside-mounted balanced single seals with self-lubricating seal faces. Neither external cooling, lubrication equipment or a supply system is required. The design and material selection meets the needs of the pharmaceutical and chemical processing industries and they are excellent for low duty mixing applications and operation in vacuum conditions.

The seal can be supplied in component form consisting of spring-loaded face, driver retainer, and mating ring, or pre-assembled on a flange. The flange version can be equipped with a debris well, enabling it to capture face wear particles, preventing the contamination of process fluid. Standard flange designs are available with dimensions to DIN 28138 Parts 1 and 3. Customized flanges available on request.
Design Features

- Single O-ring mixer seal for top entry vessels
- Outside mounted dual balanced face
- Face material of special dry running carbon
- Reverse pressure design (high pressure and vacuum)
- T-Bars for rugged drive and exact axial guidance
- Standard sizes from 25 to 125 mm shaft diameter
- Mechanical wear indication
- Suitable for application in explosive areas. Certificates of conformity according to European Directive 94/9/EC (ATEX) Cat. 1, 2 and 3 available on request
- Standard design options:
  – component seal
  – component seal with standard flange (according to DIN)
 – component seal with flange and debris well

Performance Capabilities*

- Temperature: -40°C to 150°C
- Operating pressure: vacuum up to 6 bar(g)
- Static test pressure: up to 9 bar(g)
- Speed: up to 1000 rpm
        (depending on shaft diameter and pressure)
- Shaft Runout: radial: 1.5 mm
               axial: +/- 1.5 mm

*Maximum values (dependant on combination of operating conditions). For details see chart operating limits below. For operating conditions outside these limits consult John Crane.

Speed [rpm]

*Shaft Diameter 125 mm to 5 bar, 140 to 160 mm to 3 bar
(For other pressures, please consult John Crane)
