

# e-IXP Series

CENTRIFUGAL SINGLE STAGE END-SUCTION PUMP

DESIGNED IN COMPLIANCE WITH ISO 2858 AND ISO 5199 STANDARDS

## Xylect

Xylect is a pump selection software with an extensive online database of product information across the entire range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

Xylect is available:

On the website – [www.xylect.com](http://www.xylect.com)

For more information, please, see page 187-188.

## Directive 2009/125/EC of the European Union

The **Directive 2005/32/EC** on energy-using products (**EuP**) and the subsequent **Directive 2009/125/EC** on energy-related products (**ErP**) established the ecodesign requirements for products to reduce their energy consumption and consequently their environmental impact.

These requirements apply to products placed and used in the European Economic Area (European Union plus Iceland, Liechtenstein and Norway) as a stand-alone unit or as integrated parts in other products.

The table shows the Regulations that define the requirements for Lowara products::

Product	Regulations	From	Target
Pumps*	(EU) N. 547/2012	1 January 2015	<b>MEI</b> ≥ 0,4
Circulators**	(EC) N. 641/2009, (EU) N. 622/2012 e (EU) 2019/1781	1 August 2015	<b>EEl</b> < 0,23
Electric motors	(EU) 2019/1781 e 2021/341	1 July 2021	<b>IE2</b> : three-phase motors with a rated output ≥ 0,12 and < 0,749 kW <b>IE3</b> : three-phase motors with a rated output ≥ 0,75 and < 1000 kW
Variable speed drives (VSD)***	(EU) 2019/1781 e 2021/341	1 July 2021	<b>IE2</b>

\* some types of pump, used for pumping clean water.

\*\* circulators with a rated hydraulic output power of between 1 and 2500 W, designed for use in heating systems or in secondary circuits of cooling distribution systems.

\*\*\* variable speed drives with three-phase input and rated output power from 0,12 kW up to 1000 kW, rated for operating with motor included in the same regulations.

From 1 July 2023 it will be introduced additional requirements.

## e-IXP SERIES GENERAL INTRODUCTION

The new **e-IXP** is single stage, volute casing end suction pump built to **comply with ISO 2858 and ISO 5199 Standards**. The new e-IXP pump is capable of meeting the pumping needs of customers in virtually all major markets and can be supplied in multiple materials of constructions and with various shaft sealing configurations. The design is the result of the close collaboration between our customers and us, aiming to offer a new efficient and reliable series suitable for all industrial applications.

### Pump design

The new **e-IXP** is a **centrifugal single stage end-suction pump** designed in compliance with **ISO 2858** from a dimensions point of view, and with **ISO 5199** for quality and technical requirements. Optimized hydraulics guarantees high efficiency and wide hydraulic coverage, including sizes above **ISO 2858**.

Maximum casing pressure is **PN 25**, and the pump is provided with **PN16 drilled flanges (EN1092/ISO7005)** as standard.

The e-IXP pumps are also available in a **wide range of materials**, from ductile iron to super duplex stainless steel, to address various pumping needs.

The pumps can be equipped with **unbalanced mechanical seals**, but it is also possible to choose **balanced mechanical seals, single or double cartridge seals**.

We offer a medium-heavy duty bearing bracket design with double row drive-end ball bearings either grease lubricated for 25000 hours lifetime, or oil lubricated for 40000 hours lifetime.

A wide range of options and accessories is available to make a custom-built pump that suits all the industrial needs.

The e-IXP series pumps are available in the following constructions:

- **e-IXPC**

is a frame mounted, single stage, volute casing end suction, top centerline discharge pump.

The hydraulic part is coupled to the motor using a flexible coupling with spacer. This version is also available without spacer coupling (e-IXPF).

- **e-IXP**

is a bare shaft, single stage, volute casing end suction, top centerline discharge pump, suitable to be coupled with a standard electric motor.

- **e-IXPS**

is a closed coupled, single stage, end suction, top centerline discharge block pump. The e-IXPS offers the features of an ISO 5199 pump in an economical compact package, ideal for OEM applications.

### Hydraulic specifications

- Maximum delivery:
  - up to **650** m<sup>3</sup>/h for 2 poles range.
  - up to **1300** m<sup>3</sup>/h for 4 poles range.
  - up to **800** m<sup>3</sup>/h for 6 poles range.
- Maximum head:
  - up to **160** m for 2 poles range.
  - up to **65** m for 4 poles range.
  - up to **28** m for 6 poles range.
- Hydraulic performance compliant with ISO 9906:2012 (Grade 2B).
- Fluid temperature range: **-40 to +180 °C**.
- Maximum operating pressure<sup>(\*)</sup>:
  - standard version in ductile iron and duplex: **25 bar**
  - Standard version in AISI316: **16 bar**

<sup>(\*)</sup>see page 16 for more information.

### Motor specifications

- Squirrel cage in short circuit enclosed construction with external ventilation (TEFC).
- 2-pole, 4-pole and 6-pole ranges.
- **IP55** protection degree as motor (EN 60034-5)
- Performances according to EN 60034-1.
- **IE3** efficiency level (three-phase 0,75 to 375 kW).
- **155 (F)** insulation class.
- Standard voltage:
  - 3 x 220-240/380-415 V 50 Hz for power up to 3 kW
  - 3 x 380-415/660-690 V 50 Hz for power above 3 kW
- **PTC** standard offer on motor IEC200 and above.

Note

- Anti-clockwise rotation when facing pump's suction port.

### Flanges

- **Standard flanges according to EN1092/ISO7005**, PN16, are also available with PN25 drilling.
- **Optional flanges ASME** compatible (ASME B16.5, Class 150 and 300)
- Pump does not include counter-flanges.

## e-IXP SERIES for INDUSTRY APPLICATIONS & BENEFITS

### Applications

The new e-IXP pump has been designed to be the ideal pump for a wide range of application thanks to a versatile design with a wide range of options and materials available.

The pump has been developed for the Medium/Heavy Industrial Market but can be also a perfect solution in Light Industry, Public Utilities or District Heating.

The e-IXP series can be used in the following applications:

- Water intake
- Water transfer and circulation
- General industry, OEM
- Process cooling and heating
- Industrial building cooling and heating
- Industrial fluid transfer
- Boiler feed boosting
- District heating and cogeneration
- Filtration and Ultrafiltration systems
- Filtration for coolant treatment systems
- Parts cleaning and washing machines
- Galvanic processes and paint systems
- Tank loading and transfer, tank cleaning
- Liquid mixing and blending
- Water park applications

### Benefits

The e-IXP pump permits to achieve the following benefits:

- **RELIABILITY:** The robust construction and operation, the choice of materials and the high quality production guarantee a continuous operation without faults and a shorter down time. Features like casing wear rings, durable dry shaft in stainless steel ASTM 431 and heavy duty bearing bracket with double row drive-end ball bearing have been selected to grant pump robustness and durability even in heavier applications.
- **VERSATILITY:** A full range of model sizes, exceeding the ones of ISO 2858, matches all needed duty point. A wide range of materials and shaft seals options allow to handle different type of liquids at different conditions. The more compact e-IXPS is perfect on OEM applications or in case of space constrains.
- **SIMPLICITY:** A standardized pump according to ISO 5199 and ISO 2858 suits the retrofit market. The modular design optimizes spare parts management and reduces lead time. Thanks to *Xylem optimize* operating data are available for maintenance logging.
- **EFFICIENCY:** The new hydraulics with stainless steel impeller significantly reduce life cycle cost and boost pump performances. Use of 5th generation HYDROVAR variable speed drive further reduces energy consumption by up to 70%, depending on systems costs and operating times.
- **OPTIMIZATION:** Thanks to the new *Xylem optimize*, pumps health is always under control. Data collected in x-Cloud allow predicting maintenance, generating reports and sharing data with other users. Info on vibration, temperature and magnetic flux can be always visualized on a smart device via a dedicated APP.
- **COMPLIANCE:** the pumps comply the MEI regulation (EU) No 547/2012 at the design speed.

### Optimize

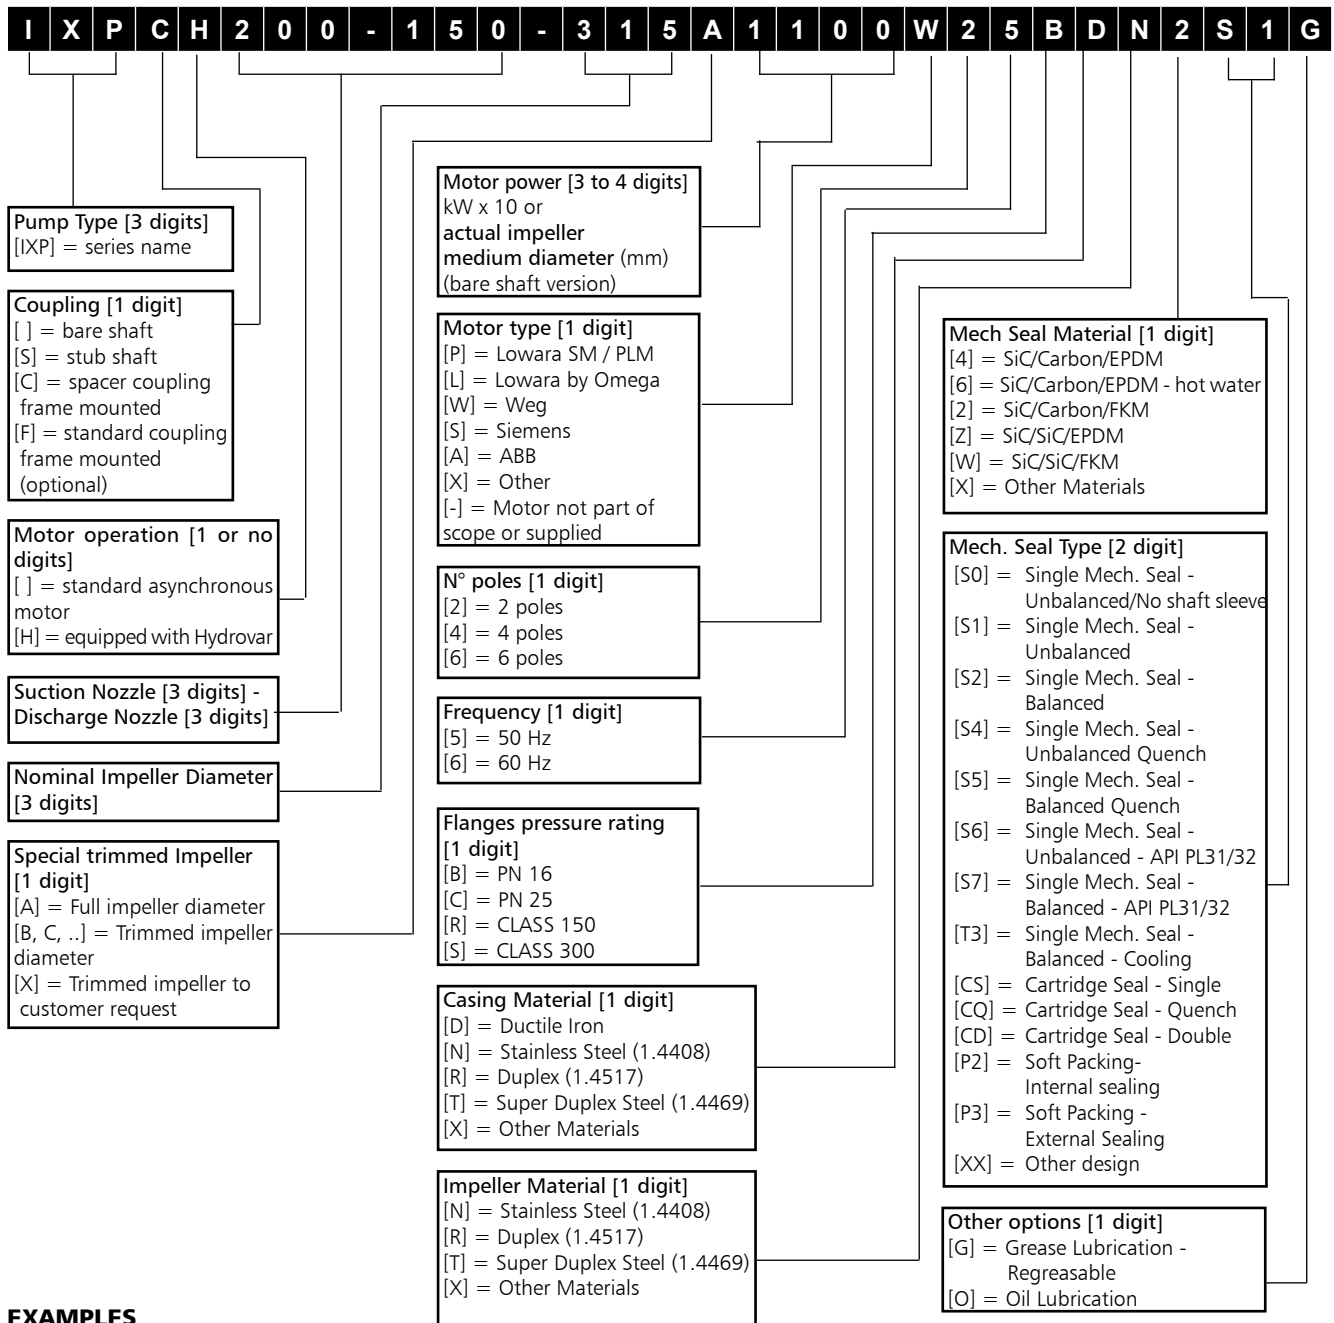

Optimize is a modular condition monitoring solution that provides health guidance and predictive maintenance advice for rotating and fixed assets such as pumps, motors, heat exchanges and steam traps.

By periodically monitoring vibration, temperature and magnetic flux, optimize is able to identify potential problems with your equipment before they occur. Health information is collected, stored and analyzed in the optimize sensor before being wirelessly transmitted to your iOS or Android smart device via Bluetooth wireless technology. The optimize mobile application provides an easy interface to understand the health of your assets, create maintenance reminders and generate detailed reports.

The optimize sensor is powered by a replaceable 3.6V Lithium Thionyl Chloride battery pack that will enable the sensor to operate for 3 to 5 years. The sensor is designed for indoor or outdoor mounting using the supplied magnetic feet or the optional fixed bracket.

## e-IXP SERIES IDENTIFICATION CODE

### EXAMPLES

#### IXP125-100-200A229CNN4S2G

IXP End-suction - bare shaft pump, 125 mm suction flange, 100 mm discharge flange, 200 mm nominal impeller diameter, A impeller diameter code, 229 mm actual impeller diameter, suction & discharge flange PN25, stainless steel casing, stainless steel impeller, Carbon/SiC/EPDM mechanical seal material, balanced single mechanical seal with shaft sleeve, bearing bracket regreasable.

#### IXPC200-150-400B900L45BDN4S4O

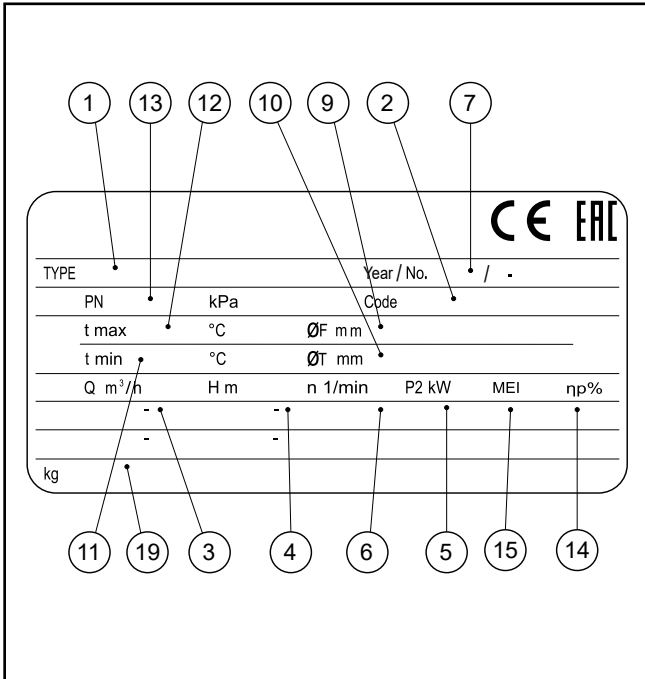

IXPC End-suction - electric pump unit with base frame, motor & spacer coupling, 200 mm suction flange, 150 mm discharge flange, 400 mm nominal impeller diameter, B impeller diameter code, 90 kW motor power, Lowara by Omega motor brand, suction & discharge flange PN16, ductile iron casing, stainless steel impeller, Carbon/SiC/FKM mechanical seal material, unbalanced single mechanical seal with shaft sleeve and quench, bearing bracket with oil lubrication.

#### IXPS40-25-160A30P25BRR4S0

IXPS End-suction - electric pump unit with stub shaft coupling and direct mounted motor, 40 mm suction flange, 25 mm discharge flange, 160 mm nominal impeller diameter, A impeller diameter code, 3 kW motor power, Lowara PLM motor brand, suction & discharge flange PN16, duplex stainless steel casing, duplex stainless steel impeller, Carbon/SiC/EPDM mechanical seal material, S0 unbalanced single mechanical seal without shaft sleeve.

## e-IXP SERIES RATING PLATE

## e-IXP SERIES AVAILABLE MATERIALS

Various material configurations are available to fit the needs of different pumped mediums and applications requirements. Below are the specifics regarding the material configurations and their availability for the different pump sizes. The material identification codes are the same used in the pump description (see page 8).

Ref. No.	PART	PUMP MATERIAL CODE				
		STANDARD (IXP, IXPC, IXPF & IXPS)				OPTIONAL (IXP, IXPC, IXPF)
		DN	NN	RN	RR	TT
MAXIMAL WORKING PRESSURE [bar]	16 & 25	16	25	16 & 25	16 & 25	
1	Impeller	1.4408	1.4408	1.4408	1.4517	1.4469
2	Discharge casing	EN-GJS-400-15	1.4408	1.4517	1.4517	1.4469
3	Casing cover	EN-GJS-400-15	1.4408	1.4517	1.4517	1.4469
(4)	Seal cover (optional design)	1.4462				1.4410
5	Wear ring	1.4462/1.4517 <sup>1)</sup>				1.4410 / 1.4469 <sup>1)</sup>
6	Impeller nut	1.4517				1.4410
(7)	Quench labyrinth ring	PTFE + 25% CARBON				
8	Shaft sleeve	1.4462				1.4410
9	Shaft	1.4057 (optional 1.4462)				
10	Stub shaft	1.4462				n/a
11	Bearing bracket	EN-GJL-250				
12	Bearing cover	EN-GJL-150				
13	Motor adapter	EN-GJL-250				
14	Pump support foot	1.0038				
15	Mechanical seal (standard option)	CARBON/SIC/EP/316SS		CARBON/SIC/EP/DUPLEX	CARBON/SIC/EP/HAST-C	
16	O-ring	PTFE				
17	O-ring	EPDM (optional FKM/FEPM)				
18	Gasket (optional design)	PTFE COMPOUND ( e.g. GYLON® STD3501E)				
19	Plug	316SS	1.4462		1.4410	
20	Radial shaft seal ring	FKM				
21	Key	1.4571				
22	Screw & nut	316SS				
23	Lifting lug	GALVANIZED CARBON STEEL				

1) Depending on pump size, 2) Casted quality

65-40-250	2,2	0,6	125-100-315	1,0	0,3
65-40-315	5,2	1,3	125-100-400	-	2,0
80-65-125	0,6	0,2	150-125-200	0,6	0,2
80-65-160	0,6	0,2	150-125-250	0,6	0,2
80-50-200	0,6	0,2	150-125-315	2,6	0,7
80-50-250	2,3	0,6	150-125-400	-	1,4
80-50-315	1,5	0,4	200-150-200	-	0,6
100-80-125	0,6	0,2	200-150-250	-	0,8
100-80-160	1,7	0,4	200-150-315	-	0,9
100-65-200	1,6	0,4	200-150-400	-	0,5
100-65-250	2,3	0,6	250-200-250	-	0,5
100-65-315	3,1	0,8	250-200-315	-	0,5
125-80-160	1,7	0,4	300-250-315	-	0,5

Seal operating pressure =  
Pump inlet pressure + Δp [bar<sub>G</sub>]

where, Pump inlet pressure is the pressure measured on the suction flange (System pressure) and Δp is the pressure increase in the seal chamber. Δp depends on pump speed and size, see table.

For different pump speed:  
Δp = Δp(@2950) \* (actual speed / 2950) <sup>2</sup> [bar]

Example: IXP65-40-250 with 2200 rpm (diesel driven)  
Δp = 2,2 \* (2200 / 2950) <sup>2</sup> = 1,2 [bar]

For pumps with speed ~950rpm:  
Δp = Δp(@1450) / 1,5

## MINIMUM REQUIRED SEAL PRESSURE FOR HOT WATER

Water Temperature [°C]	Vapor Pressure [bar <sub>G</sub> ]	Minimum Required Seal Pressure [bar <sub>G</sub> ]
80	-0,54	0,00
85	-0,44	0,20
90	-0,31	0,42
95	-0,17	0,68
100	0,00	0,97
105	0,20	1,31
110	0,42	1,69
115	0,68	2,12
120	0,97	2,60
125	1,31	3,14
130	1,69	3,75
135	2,12	4,42
140	2,60	5,17
145	3,14	6,00
150	3,75	6,90

Minimum Pump Inlet Pressure =  
(Minimum Required Seal Pressure + 0,2) - Δp [bar<sub>G</sub>]

(Valid for atmospheric pressure p<sub>0</sub> = 1.01 bar<sub>A</sub>)

NOTE: the minimum Pump Inlet Pressure can even be higher according NPSHr calculation.

## **e-IXP SERIES MOTORS (ErP 2009/125/EC)**

- Short-circuit squirrel-cage motor, enclosed construction with external ventilation (TEFC).
- **IP55** protection degree.
- Insulation class **155 (F)**.
- Electrical performances according to EN 60034-1.
- **Supplied three-phase surface motors with IE3 efficiency level for power  $\geq 0,75$  kW as standard according to EN 60034-30:2009 and EN 60034-30-1:2014.**
- Metric cable gland according to EN 50262.
- PTC included in motors from IEC size 200 and above (one per phase, 155°C).
- **Rated power:**
  - from 1,5 to 200 kW 2 poles
  - from 1,1 to 110 kW 4 poles
  - from 1,1 to 30 kW 6 poles
- **Standard voltage**
  - Three-phase** version:
    - 220-240/380-415 V 50 Hz for power up to 3 kW.
    - 380-415/660-690 V 50 Hz for power above 3 kW.
    - Overload protection to be provided by the user.
    - Maximum ambient temperature: 50 °C,  
(40 °C, for 6 poles model with power 1,1, 1,5 and 2,2 kW)

From 1 July 2021 in accordance with the **Regulations (EU) 2019/1781 and 2021/341**, the three-phase 50 Hz, 60 Hz or 50/60 Hz **surface motors** with **power outputs ranging from 0,12 to 0,749 kW** must have a minimum level **IE2** efficiency; the ones with power outputs ranging **from 0,75 and 1000 kW** must have a minimum level of **IE3** efficiency.

From 1 July 2023, it will be introduced additional requirements.

The following tables also contain the mandatory information pursuant to Annex I, section 2, of the aforementioned Regulations.

IXP-volt-low-a-en\_a\_te

For higher power motors special voltages available on request.

## SOUND PRESSURE LEVELS

The tables below show the mean sound pressure levels (L<sub>p</sub>) measured at 1 meter distance in a free field according to EN ISO 11203. The noise values are measured on 50 Hz motors and have a tolerance of 3 dB (A) according to EN ISO 4871.

## e-IXP SERIES PUMPS (ErP 2009/125/EC)

With the **Regulation (EU) N. 547/2012**, the European Commission has established the requirements of ecodesign for some typologies of **pumps** used for pumping **clean water**, placed on the market and operated as stand-alone units or as parts of other products.

For end-suction close-coupled pumps (ESCC for the Regulation) the requirements refers to:

- just the pump and not the pump and motor assembly (electric or combustion);
- pumps with:
  - just one impeller;
  - a nominal pressure PN not higher than 16 bar (1600 kPa);
  - a minimum nominal flow not less than 6 m<sup>3</sup>/h;
  - a maximum nominal power at the shaft not higher than 150 kW;
  - a speed of 2900 min<sup>-1</sup> (for electric pumps this means 50 Hz 2-pole electric motors) and with a head not greater than 140 metres;
  - a speed of 1450 min<sup>-1</sup> (for electric pumps this means 50 Hz 4-pole electric motors) and with a head not greater than 90 metres;
- use with clean water at a temperature ranging from -10°C to 120°C (the test is performed with cold water at a temperature not higher than 40°C).

This regulation states that water pumps shall have index MEI coming from a dedicated formula which considers hydraulic efficiency values at 'best efficiency point' (BEP), 75 % of the flow at BEP (Part load – PL) and 110 % of the flow at BEP (Over load – OL).

The Regulation also establishes the following deadline:

from	minimum efficiency index (MEI)
1 <sup>st</sup> January 2015	MEI ≥ 0,4

### Regulation (EU) n. 547/2012 – Annex II – point 2 (Product information requirements)

- 1) Minimum efficiency index: see MEI values in specific tables on following page.
- 2) The benchmark for most efficient water pumps is MEI ≥ 0,70.
- 3) Year of manufacture: see date on rating plate (≥ 2020).
- 4) Manufacturer: Xylem Service Italia Srl - Via dott. Vittorio Lombardi 14, 36075 Montecchio Maggiore (VI), Italia - Reg. No 07520560967.
- 5) Product type: see the Model column in the tables in the *List of models* section.
- 6) Hydraulic pump efficiency with trimmed impeller: see the *Operating Characteristics* graphs in the following pages.
- 7) Pump performance curves, including the performance curve: see the *Operating Characteristics* graphs in the following pages.
- 8) The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter.
- 9) The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable speed drive that matches the pump duty to the system.
- 10) Information relevant for disassembly, recycling or disposal at end-of-life: observe the current laws and by-laws governing sorted waste disposal. Consult the product operating manual.
- 11) "Designed for use below – 10 °C only": note not applicable to these products.
- 12) "Designed for use above 120 °C only": note not applicable to these products.
- 13) Specific instructions for pumps as per points 11 and 12: not applicable to these products.
- 14) "Information on benchmark efficiency is available at": [www.europump.org](http://www.europump.org) (Ecodesign section).
- 15) The benchmark efficiency graphs with MEI = 0.7 and MEI = 0.4 are available at [www.europump.org](http://www.europump.org), (Ecodesign, Efficiency charts). Refer to "ESCC 1450 rpm", "ESCC 2900 rpm".

**IXPC , IXPF  
PUMP BASE FRAME**

STANDARD DESIGN FOR IXPC, IXPF PUMPS

BASE FRAME MUST BE FILLED WITH CONCRETE

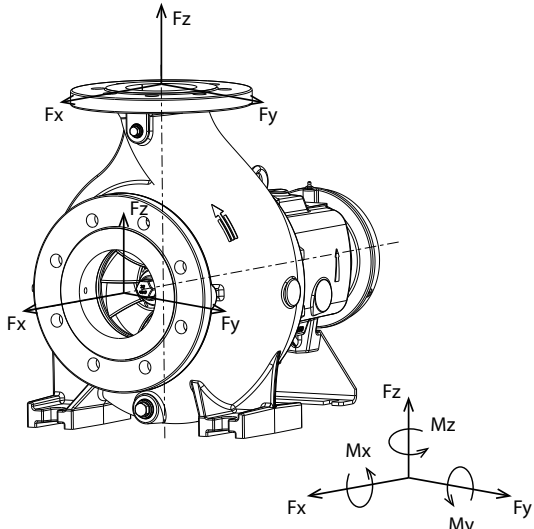

STANDARD MATERIAL: CARBON STEEL (PAINTED), ALL SCREWS: V2A

OPTIONAL DESIGN: WITH DRIP PAN (316SS)

OPTIONAL MATERIAL: CARBON STEEL ZINC PLATED

## IXP, IXPF, IXPC SERIES PERMISSIBLE FORCES AND MOMENTS AT PUMP NOZZLES

Forces at the pump flanges calculated according to EN ISO 5199:2002.

When the applied loads do not all attain the maximum values allowed, one of these loads may exceed the normal limit, provided that the following supplementary conditions are satisfied:

- any component of a force or of a moment shall be limited to 1,4 times the maximum allowable value;
- the actual forces and moments acting on each flange are governed by the following formula:

$$\left(\frac{\sum |F_{x,y,z}|}{\sum |F_{max}|}\right)^2 + \left(\frac{\sum |M_{x,y,z}|}{\sum |M_{max}|}\right)^2 \leq 2$$

## IXPS SERIES

### PERMISSIBLE FORCES AND MOMENTS AT PUMP NOZZLES

Forces at the pump flanges calculated according to EN ISO 5199:2002.

When the applied loads do not all attain the maximum values allowed, one of these loads may exceed the normal limit, provided that the following supplementary conditions are satisfied:

- any component of a force or of a moment shall be limited to 1,4 times the maximum allowable value;
- the actual forces and moments acting on each flange are governed by the following formula:

$$\left(\frac{\sum |F_{x,y,z}|}{\sum |F_{max}|}\right)^2 + \left(\frac{\sum |M_{x,y,z}|}{\sum |M_{max}|}\right)^2 \leq 2$$

### All available materials up to 140°C

## **OPTIMIZE™ CONDITION MONITORING TO OPTIMIZE YOUR BOTTOM LINE**

The optimize™ modular condition monitoring solution provides health guidance and predictive maintenance advice for rotating and fixed assets such as pumps, motors, heat exchangers and steam traps. It periodically monitors system vibration and temperature and allows everyday users to access simple-to-use monitoring tools from iOS or Android mobile devices.

Using predictive analysis, optimize identifies potential problems with your equipment before they occur, to help you manage system reliability and maintenance. Information is monitored, collected, stored and analyzed in the optimize sensor. This allows you to understand the current health and historical trends of your assets, create maintenance reminders and generate detailed reports. As a result, you can perform preventative maintenance before issues become critical to uptime.

### **BENEFITS:**

- Predictive maintenance to monitor the health of mechanical and electrical assets
- Asset management including asset location, size and manufacturing date
- System transparency to optimize reliability
- Optimized reporting that helps to simplify documentation, manage system maintenance and inform purchasing
- The ability to automatically share data with multiple local users
- Conveniently monitor system conditions on our simple-to-use mobile application

### **INDUSTRIES:**

- Commercial Building Services
- Manufacturing
- Agriculture
- Water Utilities

### **APPLICATIONS:**

- Monitoring the vibration of pumps and motors
- Monitoring the temperature of pump bearings
- Monitoring the temperature of motors to prevent overheating and winding damage
- Monitoring the performance of heat exchangers
- And more

# OPTIMIZE™ CONDITION MONITORING AND OPTIMIZATION SPECIFICATIONS

Surface Temperature Measurement	
Measurement range	-20°C to +135°C (-4°F to +275°F)
Measurement method	Non-contact infrared laser
Minor gradient accuracy (0°C to 25°C gradient)	+/- 1°C
Moderate gradient accuracy (25°C to 50°C gradient)	+/- 2°C
Large gradient accuracy (50°C to 100°C gradient)	+/- 4°C
Vibration Measurement	
Frequency range	5Hz to 1,100Hz
Measurement method	Independent 3-axis
Primary output (per axis)	Single value RMS
Other outputs	Kurtosis and FFT
Vibration limit (max acceleration)	16g
Threshold standard (Global)	ISO 10816-7
Threshold standard (North America)	ANSI/HI 9.6.4
Power	
Batteries (replaceable)	(2) 3.6V AA, 2400mAh, Lithium
Battery life (using default sampling rate at 25°C)	3 to 5 years
Default sampling rate	1 sample per 30 minutes
Available sampling rates (one sample per unit of time)	10 seconds to 12 hours
Wireless Communication	
Network type	Bluetooth® Low Energy 5.01
Connection range (without interference)	30 meters (100 feet)
Environmental	
Ambient operating range	-20°C to +50°C (-4°F to +122°F)
Storage temperature (5 to 95% humidity non-condensing)	-25°C to +65°C (-13°F to +149°F)
Protection rating	IP56, NEMA 4
Physical Properties	
Weight	145g (0.32 lbs.)
Status	LED
Mounting method (standard)	Magnetic (16mm potted magnets)
Mounting method (optional)	Drill and tap with plate
Certifications	
Certifications	CE, FCC, UL
Intended use (environments)	Non-hazardous, non-corrosive
Part Numbers	
optimize (standard sensor)	P2007000
optimize battery replacement kit	P2007030
optimize optional flat plate mounting kit	P2007031

<sup>1</sup>Backwards compatible up to Bluetooth® Low Energy 4.2

# **IXP..H**

## **e-IXP WITH HYDROVAR**

## IXP..H SERIES e-IXP WITH HYDROVAR

### Background and context

For all pumping needs the demand for intelligent pumping systems is constantly growing. Controlled systems offer many advantages: reduced operating costs for the lifetime of the pump, lower environmental impact, longer lifetime of piping systems and networks.

For this reason, Lowara has developed the IXP..H: an intelligent pumping system which assures high level performance with energy consumption tailored to the system's demand.

According to the EN 50598-2 standard the IXP..H is an IES2 power drive system, the highest efficiency class defined for this category.

### Benefits of e-IXP with HYDROVAR

**Saving:** IXP..H transforms the IXP pumps into variable speed intelligent pumping systems. Thanks to the HYDROVAR, the speed of each pump varies so as to maintain a constant flow, a constant pressure, or a differential pressure. In doing so, at any point in time, the pump only receives the energy required. This in turns allows for considerable savings, especially for systems that have varying loads throughout the day.

**Easy installation and space-saving:** IXP..H saves time and space during installation. The Hydrovar is delivered already mounted on the motor (for models up to 22kW). The hydrovar is kept cool by the motor fan and does not require a control panel. In order to function, only fuses on the supply line are needed (Check your local electrical installation regulations).

**Standard motors:** IXP..H models are fitted with three-phase standard TEFC motors with insulation class 155 (F).

### Identification code:

IXP..H models are identified by the letter "H".

### Key Features of the HYDROVAR

- **No need for additional pressure sensors:**  
The IXP..H is fitted with a pressure transmitter or differential pressure transmitters, depending on the application.
- **No need for special pumps or motors.**
- **IXP..H is already pre-wired.**
- **No need for bypass or safety systems:**  
The IXP..H will immediately switch off when demand drops to zero or when it exceeds maximum pump capacity; thus making installation of additional safety devices unnecessary.
- **Anti-condensation device:**  
The HYDROVAR is fitted with anti-condensation devices which switch on when the pump is in standby in order to prevent condensation forming in the unit.

## IXP.H SERIES e-IXP WITH HYDROVAR

The basic function of the HYDROVAR device is to control the pump to meet the system demands.

### HYDROVAR performs these functions by:

- 1) Measuring the system pressure or flow via a transmitter mounted on the pump's delivery side.
- 2) Calculating the motor speed to maintain the correct flow or pressure.
- 3) Sending out a signal to the pump to start the motor, increase speed, decrease speed or stop.
- 4) In the case of multiple pump installations, HYDROVAR will automatically provide for the cyclic changeover of the pumps' starting sequence.

In addition to these basic functions, HYDROVAR can perform controls only manageable by the most advanced computerized control systems. Some examples are:

- Stop the pump(s) at zero demand.
- Stop the pump(s) in case of water failure on the suction side (protection against dry running).
- Stop the pump if the required delivery exceeds the pump's capacity (protection against cavitation caused by excessive demand), or automatically switch on the next pump in a multiple series.
- Protect the pump and motor from over-voltage, under-voltage, overload, and earth fault.
- Vary the pump speed: acceleration and deceleration time.
- Compensate for increased flow resistance at high flow rates.
- Conduct automatic tests at set intervals.
- Monitor the converter and motor operating hours.
- Display the energy consumption (kWh).
- Display all functions on an LCD in different languages (Italian, English, French, German, Spanish, Portuguese, Dutch, etc...).
- Send a signal to a remote control system which is proportional to the pressure and frequency.
- Communicate with external control system via Modbus (RS 485 interface) and Bacnet as standard.

## e-IXP.H SERIES HYDROVAR (ErP 2009/125/EC)

From 1 July 2021 in accordance with the new **Regulations (EU) 2019/1781** and **2021/341** the **variance speed drives** with **three-phase input/output current**, rated voltage between **100 V** and **1000 V**, rated for operating with motors included in the same regulation (**0,12- 1000 kW**), must have efficiency level **IE2**.

The tables below also contain the mandatory information pursuant to Annex I, section 4, of the Regulations.

## HYDROVAR HVL EMC COMPATIBILITY

### EMC requirements

HYDROVAR fulfills the product standard EN61800-3:2004 + A1:2012, which defines categories (C1 to C4) for device application areas.

Depending on the motor cable length, a classification of HYDROVAR by category (based on EN61800-3) is reported in the following tables:

HVL	HYDROVAR classification by categories based on EN61800-3
2.015 ÷ 2.040	C1 (*)
3.015 ÷ 3.110	C2 (*)
4.015 ÷ 4.220	C2 (*)

(\*) 0,75 motor cable length; contact Xylem for further information En-Rev\_A

## CARD

### Premium Card HYDROVAR

For the IXP.H the Premium Card comes fitted as standard on the standalone HYDROVAR.

This allows to control up to five fix speed pumps via an external panel.

The Premium Card will allow additional features listed below:

- 2 additional Analog Inputs
- 2 Analog Outputs
- 1 additional digital input
- 5 relays.

## OPTIONAL COMPONENTS

### Sensors

The following sensors are available for HYDROVAR:

- Pressure-transducer
- Differential pressure-transducer
- Temperature-sensor
- Flow indicator (orifice plate, inductive flow meter)
- Level-sensor.

## HYDROVAR HVL (WALL MOUNTING KIT) DIMENSIONS AND WEIGHTS

As an option a HYDROVAR wall mounting kit is also available, this is used where mounting on the pump unit is impossible or where you would like the controls in another location, these are available for the new generation HYDROVAR HVL 2.015-4.220 (22 kW). The speed of the cooling fan modulates with the HYDROVAR usage which optimizes energy consumption and also reduces noise.

# **REPORTS AND DECLARATIONS**

## REPORTS AND DECLARATIONS

### i) Test reports

#### a) **Factory Test Report**

- Test report compiled at the end of the assembly line, including flow-head performance test (ISO 9906:2012 – Grade 2B) and hydrostatic pressure test.

#### b) **Audit Test Report**

- Test report for electric pumps compiled in the test room, comprising flow-head-pump input-pump efficiency performance test (according to ISO 9906:2012)

#### c) **NPSH Test Report**

- Test report for electric pumps compiled in the test room, comprising flow-NPSH performance test (according to ISO 9906:2012)

#### d) **Noise Test Report**

- Report indicating sound pressure and power measurements (EN ISO 20361, EN ISO 11203, EN ISO 4871)

#### e) **Vibration Test Report**

(unavailable for submerged or submergible pumps)  
- Report indicating vibration measurements (ISO 10816-1)

### ii) Declaration of product conformity with the technical requirements indicated in the order

#### a) **EN 10204:2004 - type 2.1**

- does not include test results on supplied or similar products.

#### b) **EN 10204:W - type 2.2**

- includes test results (materials certificates) on similar products.

### iii) Issue of a further EC Declaration of Conformity,

- in addition to the one accompanying the product, it comprises references to European law and the main technical standards (e.g.: MD 2006/42/EC, EMCD 2014/30/EU, ErP 2009/125/EC).

*N.B.: if the request is made after receipt of the product, communicate the code (name) and serial number (date + progressive number).*

### iv) **Manufacturer's declaration of conformity**

- relative to one of more types of products without indicating specific codes and serial numbers.

### v) **Other certificates and/or documentation on request**

- subject to availability or feasibility.

### vi) **Duplication of certificates and/or documentation on request**

- subject to availability or feasibility.

# **TECHNICAL APPENDIX**

## NPSH

The minimum operating values that can be reached at the pump suction end are limited by the onset of cavitation.

Cavitation is the formation of vapour-filled cavities within liquids where the pressure is locally reduced to a critical value, or where the local pressure is equal to, or just below the vapour pressure of the liquid.

The vapour-filled cavities flow with the current and when they reach a higher pressure area the vapour contained in the cavities condenses. The cavities collide, generating pressure waves that are transmitted to the walls. These, being subjected to stress cycles, gradually become deformed and yield due to fatigue. This phenomenon, characterized by a metallic noise produced by the hammering on the pipe walls, is called incipient cavitation.

The damage caused by cavitation may be magnified by electrochemical corrosion and a local rise in temperature due to the plastic deformation of the walls. The materials that offer the highest resistance to heat and corrosion are alloy steels, especially austenitic steel. The conditions that trigger cavitation may be assessed by calculating the total net suction head, referred to in technical literature with the acronym NPSH (Net Positive Suction Head).

The NPSH represents the total energy (expressed in m.) of the liquid measured at suction under conditions of incipient cavitation, excluding the vapour pressure (expressed in m.) that the liquid has at the pump inlet.

To find the static height  $h_z$  at which to install the machine under safe conditions, the following formula must be verified:

$$h_p + h_z \geq (NPSH_r + 0.5) + h_f + h_{pv} \quad ①$$

where:

**$h_p$**  is the absolute pressure applied to the free liquid surface in the suction tank, expressed in m. of liquid;  $h_p$  is the quotient between the barometric pressure and the specific weight of the liquid.

**$h_z$**  is the suction lift between the pump axis and the free liquid surface in the suction tank, expressed in m.;  $h_z$  is negative when the liquid level is lower than the pump axis.

**$h_f$**  is the flow resistance in the suction line and its accessories, such as: fittings, foot valve, gate valve, elbows, etc.

**$h_{pv}$**  is the vapour pressure of the liquid at the operating temperature, expressed in m. of liquid.  $h_{pv}$  is the quotient between the  $P_v$  vapour pressure and the liquid's specific weight.

**0,5** is the safety factor.

The maximum possible suction head for installation depends on the value of the atmospheric pressure (i.e. the elevation above sea level at which the pump is installed) and the temperature of the liquid.

To help the user, with reference to water temperature (4° C) and to the elevation above sea level, the following tables show the drop in hydraulic pressure head in relation to the elevation above sea level, and the suction loss in relation to temperature.

<b>Water temperature (°C)</b>	20	40	60	80	90	110	120
<b>Suction loss (m)</b>	0,2	0,7	2,0	5,0	7,4	15,4	21,5

<b>Elevation above sea level (m)</b>	500	1000	1500	2000	2500	3000
<b>Suction loss (m)</b>	0,55	1,1	1,65	2,2	2,75	3,3

Friction loss is shown in the tables Flow Resistance of this catalogue. To reduce it to a minimum, especially in cases of high suction head (over 4-5 m.) or within the operating limits with high flow rates, we recommend using a suction line having a larger diameter than that of the pump's suction port. It is always a good idea to position the pump as close as possible to the liquid to be pumped.

Make the following calculation:

Liquid: water at ~15°C  $\gamma = 1 \text{ kg/dm}^3$

Flow rate required: 25 m<sup>3</sup>/h

Head for required delivery: 70 m.

Suction lift: 3,5 m.

The selection is an 33SV3G075T pump whose NPSH required value is, at 25 m<sup>3</sup>/h, of 2 m.

For water at 15 °C

$$h_p = P_a / \gamma = 10,33\text{m}, h_{pv} = P_v / \gamma = 0,174\text{m} (0,01701 \text{ bar})$$

The  $H_f$  flow resistance in the suction line with foot valves is ~ 1,2 m.

By substituting the parameters in formula ① with the numeric values above, we have:

$$10,33 + (-3,5) \geq (2 + 0,5) + 1,2 + 0,17$$

from which we have: 6,8 > 3,9

The relation is therefore verified.

**VAPOUR PRESSURE**  
**VAPOUR PRESSURE  $p_s$  AND  $\rho$  DENSITY OF WATER TABLE**

hr = flow resistance for 100 m of straight pipeline (m)

V = water speed (m/s)

G-at-pct-en\_b\_th

## FLOW RESISTANCE

### TABLE OF FLOW RESISTANCE IN BENDS, VALVES AND GATES

The flow resistance is calculated using the equivalent pipeline length method according to the table below:

ACCESSORY TYPE	DN											
	25	32	40	50	65	80	100	125	150	200	250	300
	Equivalent pipeline length (m)											
45° bend	0,2	0,2	0,4	0,4	0,6	0,6	0,9	1,1	1,5	1,9	2,4	2,8
90° bend	0,4	0,6	0,9	1,1	1,3	1,5	2,1	2,6	3,0	3,9	4,7	5,8
90° smooth bend	0,4	0,4	0,4	0,6	0,9	1,1	1,3	1,7	1,9	2,8	3,4	3,9
Union tee or cross	1,1	1,3	1,7	2,1	2,6	3,2	4,3	5,3	6,4	7,5	10,7	12,8
Gate valve	-	-	-	0,2	0,2	0,2	0,4	0,4	0,6	0,9	1,1	1,3
Foot check valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9
Non return valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9

G-a-pcv-en\_b\_th

The table is valid for the Hazen Williams coefficient  $C=100$  (cast iron pipework);

for steel pipework, multiply the values by 1,41;

for stainless steel, copper and coated cast iron pipework, multiply the values by 1,85;

When the **equivalent pipeline length** has been determined, the flow resistance is obtained from the table of flow resistance.

The values given are guideline values which are bound to vary slightly according to the model, especially for gate valves and non-return valves, for which it is a good idea to check the values supplied by manufacturers.

**FURTHER PRODUCT SELECTION  
AND DOCUMENTATION**  
**Xylect**

Xylect is pump solution selection software with an extensive online database of product information across the entire Lowara range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

The possibility to search by applications and the detailed information output given makes it easy to make the optimal selection without having detailed knowledge about the Lowara products.

The search can be made by:

- Application
- Product type
- Duty point

Xylect gives a detailed output:

- List with search results
- Performance curves (flow, head, power, efficiency, NPSH)
- Motor data
- Dimensional drawings
- Options
- Data sheet printouts
- Document downloads incl dxf files

*The search by application guides users not familiar with the product range to the right choice.*

## FURTHER PRODUCT SELECTION AND DOCUMENTATION

### Xylect

The detailed output makes it easy to select the optimal pump from the given alternatives.

The best way to work with Xylect is to create a personal account. This makes it possible to:

- Set own standard units
- Create and save projects
- Share projects with other Xylect users

Every registered user has a proper space, where all projects are saved.

For more information about Xylect please contact our sales network or visit [www.xylect.com](http://www.xylect.com).

Dimensional drawings appear on the screen and can be downloaded in dxf format.

# Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
